EIA SERVING THE ELECTRONIC INDUSTRIES

The Electronic Industries Alliance (EIA) now in its 74th year is the leading national trade organization representing U.S. electronic manufacturers—the nation's largest manufacturing sector at \$500 billion. Committed to the competitiveness of the American producer in the global marketplace, EIA represents the entire spectrum of companies involved in the design and manufacture of electronic components, parts, systems, and equipment for communications, industrial, government and consumer uses.

Originally founded in 1924 as the Radio Manufacturers Association, EIA, with more than 73 years of service to the electronic industry, has maintained a quick reaction capability to recognize problems which are common to the industry or segments of the industry, and to mount action programs leading to the solution of these concerns. Due to its broad representation and its reputation for constructive action, EIA is both nationally and internationally recognized as the spokesperson for the electronic industries.

Membership - At the present time, EIA members includes more than 2,100 member companies and several key sector organizations. EIA membership is open to all companies manufacturing electronic products in the United States. Certain other organizations may be admitted as "associate" EIA members. In addition, other groups may seek to partner with EIA and become a sector-specific association under the Alliance umbrella.

Administration - Broad EIA policy is established by a Board of Governors whose members are elected by the various Sectors of the Alliance. The EIA Executive Committee oversees programs delegated to it by the Board. An experienced, professional staff of nearly 250 persons, headed by President, Peter F. McCloskey, serves the Alliance and its members from a headquarters building located in Arlington, Virginia.

Organization - Organized along product lines, EIA Sectors, Groups, and Divisions are the individual action centers around which most of the Association's work revolves. They provide the concentrated and specialized attention required by the issues facing different facets of the electronic industries. Each Sector, Group, or Division implements its own activities to meet the needs of its industry. Alliance members may belong to as many Sectors, Groups, and Divisions as appropriate to their product lines. As currently configured, the Electronic Industries Alliance includes: the Consumer Electronics Manufacturers Association (CEMA); the Electronic Components, Assemblies, Equipment & Supplies Association (ECA); the Electronic Information Group (EIG); the Government Electronics and Information Technology Association (GEIA), the Joint Electron Device Engineering Council (JEDEC) Solid State Technology Division; and the Telecommunications Industry Association (TIA).

EIA corporate departments provide services in marketing statistics and other data, engineering standards, legislative and regulatory information, government relations, and public affairs. Services and programs of a broad nature that benefit the entire industry are also provided to the EIA membership through Board of Governors-sponsored programs. The services of all EIA departments, as well as the administrative legal, accounting, and document production services of the Alliance are accessible to each Alliance Sector. For more information, visit EIA's web site at <http://www.eia.org>.

A SUMMARY OF THE EIA STANDARDIZATION PROGRAM

The EIA Engineering Department operates a comprehensive standardization program as evidenced by over 1,500 standards and publications currently available through EIA's distributor Global Engineering Documents. These documents have been prepared and revised by more than 5,000 materially or directly affected industry, government, and consumer representatives who participate in the Engineering Department's committees and other sector, group, and division standards-setting bodies.

EIA standards development activity is conducted through panels, councils, committees, and working groups made up of interested persons from EIA member and nonmember companies, government, the academic community, and others. Following Committee consensus balloting, public review and comment, review (as appropriate) by the Engineering Department Executive Committee (EDEC) or JEDEC Council the documents are published as either EIA or JEDEC standards/publications.

Many EIA Standards become American National Standards (ANSI/EIA) through an organizational accredited development and approval process. Many of these national standards form the basis of U.S. positions in international standards development in the International Electrotechnical Commission (IEC) and International Organization for Standardization (ISO).

With reference to source and date code markings, a number of standards and publications have been adopted or are under development. EIA-476-A is the original EIA Standard that outlined requirements for the source and date code marking on electronic components and described the assignment of component manufacturer identification numbers and their sequence on the component to be marked along with the lot date code. Today, EIA-476-B is the standalone EIA standard for "date code marking". While EIA-476-A continues to serve as the source code marking, it currently is under revision as EIA Standards Proposal SP-3705A.

All standards and publications are made available for sale from Global Engineering Documents. All EIA standards and publications from across the entire alliance (through June 30, 1998) are listed in the "1998-199 Catalog of EIA Standards and Publications" and is available from Global Engineering Documents in hard copy or CD-ROM at:

**1-800-854-7179
15 Inverness Way East
Englewood, Colorado 80112 USA**

EIA SOURCE AND DATE CODE BOOK

1. What is the EIA Source Code?

It is a numeric symbol assigned and registered by EIA Headquarters that may be stamped or marked on any or all product to identify the production source or the vendor assuming product responsibility.

In addition, the EIA code provides for adding numerals to the source code symbol to identify the year and week of production.

2. How does the date code work?

In addition to a source code, the date of production may be desired. This can be accomplished by adding, following a hyphen (-), the last two digits of the production year plus the number of the week of that year.

A hypothetical example of the application of the EIA date code to the source code follows: A company is assigned the source code 113. To this are added two digits for the year - such as "98" for the current year, or "98" for 1998 - and another two digits for the week of the year. In this case, the combined source and date codes would be:

113-9810

This would represent the company's number "113" plus "98" for 1998, the production year, and "10" for the week of March 2-8, the production week. For easy identification of the week, the date code tables shown in the back of this booklet give the number of each week in both 1998 and 1999.

If a component manufacturer is unable to use the four-digit date code, and an alternate three-digit code may be used by taking only the last digit of the year. The example above would then become:

113-810

3. To whom is the EIA service available?

The registration of a source code is an EIA service available to all manufacturers of electronic equipment, and components. For this service, an annual registration fee of \$75 is assessed per member company and \$150 for non-member companies to cover administrative and production costs. Additional copies of the source and Date Code Book can be obtained from Global Engineering Documents.

ALPHABETICAL LIST OF EIA CODE SYMBOLS
